RE: PURITY™ FG Lubricants – MOAH/MOSH

The majority of the PURITY FG lubricants are comprised of over 90% White Mineral Oil and the rest of the formulation is comprised of specific functional additives. The additives vary in molecular structure and diluent oil. All components comply with the US FDA 21 CFR 178.3570 Lubricants with incidental food contact. US FDA 21 CFR 178.3570 indicates that when mineral oil is used in food grade lubricant the maximum addition to food is not to exceed 10ppm.

PURITY FG lubricants are registered with NSF for use in and around food processing equipment as either H1 – Lubricants – General – incidental contact or HT-1 – Heat Transfer Fluids – Incidental contact. When used as directed on product label, the amount of lubricant permitted in food is such a small amount, that MOAH and MOSH from a food grade lubricant contamination would be virtually undetectable.

Petro-Canada Lubricants is committed to adhering to regulatory and industry requirements, we are working through industry forums to monitor requirements and potential progression.

I certify that the above statements are true and correct to the best of my knowledge.

If you have any further questions, please do not hesitate to contact me.

Sincerely,

A handwritten signature in blue ink that reads "R. Garrido".
